$\sqrt{(S_{gw}^2 + S_{sw}^2 + S_{se}^2 + S_{am}^2) / 4}$		*

* Pathway evaluated, but not assigned a score (explain):

Groundwater: There were 5 drinking water wells evaluated within 4 miles of the site. There is no evidence of a release from the site to groundwater. Targets are not sufficient to make the site score.

Surface Water: Stormwater runoff from the site enters the stormdrain system that empties into a stormwater retention basin. The water is then pumped into Machado Lake in Ken Malloy Harbor Regional Park. The water is not treated prior to entering the lake. Although Machado Lake is listed in EPA's Impaired Water database, the impairments do not include contaminants associated with the LISI Aerospace site.

Soil Exposure and Air: The site appears to be entirely paved or covered in buildings. There are no residences, schools, daycare centers, or terrestrial sensitive environments on site.
